Website Health Overview

A clear summary of the website's current health.

The website is in generally good shape, with several practical opportunities for improvement.

Health Scores

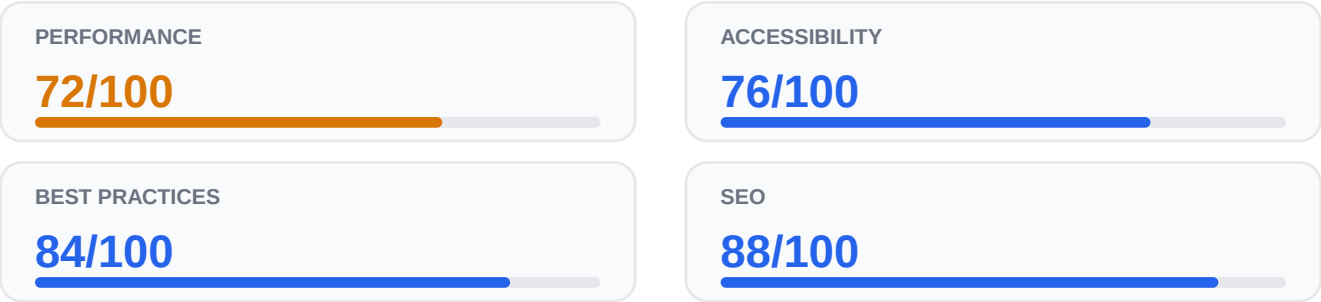

Assessment Summary

The assessment combines technical website checks with SEO, mobile, accessibility, business, performance and security & trust indicators. Scores are intended to highlight practical improvement opportunities rather than replace a full professional audit.

Google Performance Snapshot

Performance data collected from Google PageSpeed Insights.

Core Web Vitals

LARGEST CONTENTFUL PAINT	2.9
CUMULATIVE LAYOUT SHIFT	0.08
INTERACTION TO NEXT PAINT	190
FIRST CONTENTFUL PAINT	1.8
TOTAL BLOCKING TIME	180

Performance note

Performance results can vary depending on device, network conditions, server location and testing conditions. The results shown here should be used as a practical indication of areas that may benefit from optimisation.

Priority Findings

The main issues identified during this website assessment.

- 01

Images missing alternative text

HIGH PRIORITY

WHAT WE FOUND

Several images do not provide useful alternative text, which can reduce accessibility and make image content harder to understand.
- 02

Server response time

HIGH PRIORITY

WHAT WE FOUND

The initial server response could be improved to reduce the time before the page begins loading.
- 03

Responsive layout opportunities

MEDIUM PRIORITY

WHAT WE FOUND

Some layout elements would benefit from additional responsive adjustments for smaller screens.
- 04

Security header improvements

MEDIUM PRIORITY

WHAT WE FOUND

Several recommended browser security headers are not currently present.
- 05

Call-to-action improvements

LOW PRIORITY

WHAT WE FOUND

The customer journey could be strengthened with clearer calls-to-action.

Site Rescue Recommendations

Practical actions that can improve the website's health.

01

Improve image accessibility

HIGH PRIORITY

WHY IT MATTERS

Meaningful alternative text helps users who rely on assistive technology.

RECOMMENDED ACTION

Add concise, useful alt text to informative images and use empty alt attributes for decorative images.

RECOMMENDED SERVICE

[Accessibility optimisation](#)

02

Improve server response time

HIGH PRIORITY

WHY IT MATTERS

A faster initial response helps visitors start receiving the website sooner.

RECOMMENDED ACTION

Review hosting, caching, redirects and backend processing.

RECOMMENDED SERVICE

[Performance optimisation](#)

03

Strengthen responsive behaviour

MEDIUM PRIORITY

WHY IT MATTERS

Visitors increasingly access business websites from phones.

RECOMMENDED ACTION

Review fixed widths, typography, spacing and responsive layout behaviour.

RECOMMENDED SERVICE

[Mobile optimisation](#)

04

Add security hardening headers

MEDIUM PRIORITY

WHY IT MATTERS

Security headers provide additional browser-side protection.

RECOMMENDED ACTION

Review and implement appropriate HSTS, CSP, Referrer-Policy and related headers.

RECOMMENDED SERVICE

[Website security](#)

05

Improve conversion paths

LOW PRIORITY

WHY IT MATTERS

Clear customer journeys make it easier for visitors to enquire.

RECOMMENDED ACTION

Strengthen calls-to-action, contact paths and service enquiry options.

RECOMMENDED SERVICE

[Conversion optimisation](#)

06

Server response time

HIGH PRIORITY

WHY IT MATTERS

A slow initial server response can delay the beginning of the page loading process.

RECOMMENDED ACTION

Review hosting, server configuration, caching, redirects and backend processing to reduce initial response time.

RECOMMENDED SERVICE

Detailed Health Checks

The individual checks performed during the website assessment.

Performance

INFO	Largest Contentful Paint LCP: 2.9
INFO	Cumulative Layout Shift CLS: 0.08
INFO	Interaction to Next Paint INP: 190
INFO	First Contentful Paint FCP: 1.8
INFO	Total Blocking Time TBT: 180

Business Readiness

Evidence showing how easily visitors can contact or engage with the business.

Phone number • Value: true	DETECTED
Email address • Value: true	DETECTED
WhatsApp • Value: true	DETECTED
Contact form • Value: true	DETECTED
Business location • Value: true	DETECTED

Business readiness note

Business evidence is based on information detected by the scanner across the pages it was able to inspect. Presence of an item indicates detected evidence; it does not guarantee that every visitor will experience the same result in every browser or device.

Website Information

Technical and metadata information detected during the scan.

Website Metadata

PAGE TITLE	Example Business
META DESCRIPTION	A sample business website used to demonstrate the Site Rescue Studio report.
CANONICAL URL	Not detected
LANGUAGE	Not detected
VIEWPORT	Not detected
